Van Deurzen Dairy LLC
Draft Permit to Install Modification

General overview of the farm

The existing facility known as “Van Deurzen Dairy, LLC” is located in Hardin County, Marion Township, at 2500 County Road 10, Alger, Ohio 45812 in the Upper Scioto River watershed. The facility is owned and operated by Van Deurzen Dairy, LLC. A Permit to Install was issued for Van Deurzen Dairy on 7/29/10, authorizing construction of additional freestall barns that would increase the design capacity to 6,995 mature dairy cows. Construction of the freestall barns is not yet complete and the Permit to Install remains open.

Liquid manure at the facility is currently stored in a series of five earthen ponds with a total combined storage capacity of 51,460,000 gallons, which provides about 304 days’ worth of storage capacity. The separated manure solids and mortality compost material are stored on a concrete pad area with a total storage capacity of 318,267 cubic feet, which provides about 239 days’ worth of storage.

Overview of Draft Permit to Install Modification

The draft permit modification proposes no change in the number of animals, but instead proposes to construct a new earthen pond to store contaminated storm water runoff. This proposed Pond #6 would have a design capacity of 5,307,416 gallons. The addition of this pond would allow the separation of low-nutrient storm water from the liquid manure, which would result in greater flexibility in managing nutrients originating from the facility. . –End-
