**Shelby County**  
**Permit to Operate Renewals**

The two concentrated animal feeding facilities listed below – Anderson Farms and CL Farms – are both located in Shelby County and are in the Upper Great Miami Watershed. Each was previously issued a Review Compliance Certificate by the Ohio Department of Agriculture (ODA) to operate for a period of five years, after which time the facility is required to apply for a new Permit to Operate (PTO). These facilities have applied for renewed operating permits and have met the requirements in OAC 901:10-2.

Facility Name	Owner/Operator	Facility Address	Township	Watershed	Livestock	Stocking Capacity
Anderson Farms	Kenton Anderson	9000 Greenville Road; Sidney, OH 45365	Turtle Creek	Upper Great Miami	Swine (> 55 lbs)	3,840
CL Farm	Terry and Kay Knapke	155 Miami-Shelby West Road; Russia, OH 45363	Loramie	Upper Great Miami	Swine (> 55 lbs)	4,000

A Permit to Operate is drafted to regulate operations with plans for manure management, insect and rodent control, mortality management and emergency response. This permit would be valid for a five-year period, at which time the owner would be required to renew the operating permit.

A manure management plan is required as part of the PTO to demonstrate effective and responsible use of the nutrients contained in the manure. An Insect and Rodent Control plan is required to minimize the presence and negative effects of insects and rodents. A Mortality Management Plan is required for the disposal of dead livestock. Approved methods for disposal are burying, burning, rendering or composting. An Emergency Response Plan is required to ensure accidents or emergencies are handled quickly and efficiently to maintain the safety of the environment, wildlife and water supplies.

Finally, an Operating Record is contained in the draft PTO that includes all forms and information that must be maintained by the facility to show compliance with ODA’s rules. These records include inspection of the manure storage structures, manure characterization, land applications, insect and rodent control, distribution and utilization of manure, and mortality management. These records will be inspected by the department a minimum of twice annually.
